

Supply Chain Management in IFS Cloud

Empower your business to operate efficiently with complete visibility across the entire supply chain

Businesses need supply chains that are not only effective but also drive competitive advantage. Yet current market disruption, coupled with changes to buying patterns, create several barriers.

A lack of guaranteed raw materials, longer lead times, increasing supply prices, rapidly changing customer demand and staff shortages are just some of the challenges. As a result, leading companies are turning to IFS Cloud to react more quickly – turning these pressures into a real competitive differentiator.

Supply Chain Management in IFS Cloud makes it easier to operate a smooth and efficient supply chain regardless of your industry or the type of business you run. Whether you are operating locally or globally, IFS Cloud provides “multi-everything” functionality including multi-language, multi-currency, multi-site and multi-country capabilities. IFS Cloud is a single and scalable solution providing complete visibility of your supply chain across the entire enterprise.

Benefits

IFS Cloud offers leading capabilities to empower your entire end-to-end supply chain delivering tangible benefits.

Clear, Unified View

A single view across your entire ecosystem to drive efficiency and manage costs.

Improved speed to market

Optimize your supply chain to shorten product lifecycles and accelerate turnaround times.

Improve Speed-to-Market

Optimize your supply chain to shorten product lifecycles and accelerate turnaround times.

Greater transparency

Operate a fully traceable supply chain to uphold and grow your business reputation, track down the root cause of issues and mitigate risks.

Key capabilities

Demand forecasting

A comprehensive solution that enables you to visually plan and collaboratively create forecasts using a variety of sophisticated techniques, seasonal profiles and forecasting models.

Supply chain planning

Supports integrated planning and analysis across your supply network including end-to-end traceability and control across all sites and legal entities.

Inventory replenishment

Automate and quickly respond to changes in demand through inventory planning and replenishment capabilities that are seamlessly connected with demand planning.

Sales order

Manage the sales order processing across all sites from sales quotations and automated order intakes through to customer invoicing and returns.

Shipment management

Manage both the inbound receipt (including inspection, returns and scrap) and outbound deliveries of shipments.

Rental management

Supports the process for both internal and external rentals including renting in, renting out, and handling rental demand on projects and work orders.

Warehouse management

A complete solution that streamlines the warehousing process from goods receipt to point of issue. Supports traceability, shelf-life management, consignment stocks, handling units, data capture handheld devices and much more.
